

fast • affordable • reliable • quality

Managing end-user applications is a costly and risky business. Dealing with licensing, deployment, compliance and patching demands significant attention. Ensuring applications are managed properly will reduce TCO (Total Cost of Ownership) which is critical to any business looking to get ahead.

imagine your end-user applications configuring themselves exactly how you need them. *imagine* application installations that are repeatable, automated and standardised, giving you the confidence to know what you are getting each and every time. *imagine* no more. impeltec™ can make this a reality by professionally and promptly packaging your business applications.

features

Proven packaging methodology: our methodology has been implemented adhering to ITIL standards, and our people are ITIL certified, so that we can deliver reliable and quality packages every time.

Pre-packaged applications: you can select from our up-to-date library of royalty free pre-packaged titles. These applications have been packaged for easy deployment and configured with default settings.

Flexible engagement models: you control the outcomes for your business needs.

Peace of mind: strict quality assurance and testing regimes are enforced at each phase to ensure delivery to your business is clean and reliable.

what do I get?

Consultation: your business requirements understood and delivered upon. Our experts provide you with technical consultation and regular communication to ensure all your software packaging needs are met.

Compatibly review: our experts can analyse and report on the current state of your application environment and make recommendations to lower your TCO or to move you onto Windows® 10.

Packaging: automated, repeatable, and silent installations for your applications, making the distribution process to end-user assets (physical or virtual) a trouble-free experience. Our packaging processes utilise standard technologies to provide error-free silent installations. This, along with ITIL standards, provides your business with reliable packages.

Integration: to get the best out of your packaged applications they should be fully integrated into your end-user management toolset for rapid hands-free distribution.

is it for me?

- Do you have an investment in an end-user management tool, such as Windows Intune™, but are not realising the full value of automated package installations?
- Is the cost of efficiently managing your end-user application change and patch requirements a strain on your IT resources and budget?
- Is your budget hurting due to a high number of repeat desk-side visits relating to application installations and/or configurations?
- Are you after fast and reliable application packaging of your end-user software?

4 easy steps to application freedom

details

Compatibility	Let impeltec ensure your applications are future-proof, whether that be for Windows® 10, virtual environments or beyond.
Package	Easy engagement to obtain repeatable, automated and standardised installations that ensure reliability for your business applications.
Pre-packaged	Leverage impeltec's library of pre-packaged application titles for a quick and affordable way to standardise your common applications needs.
Integrate	Extend your TCO savings by integrating your applications for remote distribution. impeltec has a wealth of experience to make this a reality.

impeltec's impelApp service is available with four flexible options: Compatibly Review, Package, Pre-packaged and Integration. You choose the options that suit your business.

Each of the impelApp options are available as a fixed price, bundled, or as a T&M engagement.

Couple with our impelSOE service to have your standard business applications integrated with your Windows® SOE image.
